EDUCATION

Imperial College London

Oct. 2021 - Jun. 2023

Master of Science (MSci) in Mathematics

- President's Undergraduate Scholarship awarded by the university for academic excellence.
- Strong performance in technical modules: 87% in Machine Learning and 75% in Programming.
- Relevant Modules: Probability, Statistical Modelling, Machine Learning, Programming, Option Pricing.

PROFESSIONAL EXPERIENCE

Stockhub

Jul. 2023 - Aug. 2023

Summer Investment Analyst

- Conducted valuations of public companies in energy and tech sectors using DCF and comparable company analysis, producing recommendations to identify potential valuation inefficiencies.
- Created detailed financial models and investment reports. Presented findings and quantitative insights to senior management.
- Led a team of 4 analysts to conduct financial analysis on an energy company, effectively coordinating tasks and delivering a comprehensive valuation report ahead of schedule.

Bank of East Asia

Aug. 2021 - Oct. 2021

Financial Markets Intern

- Collaborated with Sales Management and Business Strategy team to assess performance and support the execution of sales strategies.
- Analysed weekly sales data for financial derivatives, including Interest Rate Swaps, Cross-Currency Swaps, and options, ensuring that sales reports were accurate and up to date.
- Supported the team in monitoring product performance by tracking monthly income generated by each derivative product, ensuring compliance with reporting standards.

Deloitte Digital

Mar. 2021 - Jul. 2021

Project Intern

- Participated and supported a 6-week digital transformation project for a leading luxury company, helped to obtain their business requirements and high-level solution design for a data lake platform.
- Met with clients to highlight their design principles, assisted in the production of framework capability and use case driven architecture design.
- Performed desk research to identify useful data for reference cases, and relevant sales information for use case benchmarking.

PROJECT EXPERIENCE

Master Thesis

Oct. 2024 - Jun. 2025

Quantitative Energy Risk Analysis

- Developed a quantitative model to analyse and forecast renewable energy production extremes across UK regions and seasons, producing insights for risk assessment in power markets.
- Designed and implemented a parametric bootstrap methodology in Python to measure model uncertainty, validated model fit and results across seasonal datasets, and presented findings in a clear, visualised format.

Data Science Project

Mar. 2024 - Apr. 2024

Machine Learning for High-Dimensional Data

- Trained and tuned multiple machine learning models, including Decision Trees, Random Forests, Gradient Boosted Trees, and Multi-Layer Perceptrons from scratch in Python for regression analysis.
- Implemented PCA algorithms from scratch to reduce dimensionality of complex datasets and developed penalised logistic regression using Laplacian kernels for high-dimensional medical data.

ADDITIONAL INFORMATION

- **Programming:** Built a Python pipeline that pulls market headlines daily, prompts an LLM to generate a structured briefing, and automatically emails the summary on a schedule.
- **Quantitative Skills:** Statistical modelling, time-series analysis, hypothesis testing, and dimensionality reduction for high-dimensional datasets.
- **Analytical Tools:** Advanced in Python, R and Excel, including PivotTables and VBA macros, basic SQL and time-series analysis tools such as statsmodels.
